NMA - homework from week 11

1. Consider the following table of $x$ and $y$ coordinates of 7 points:

| x | -1 | -1 | 0 | 1 | 1 | 2 | 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| y | 2.9 | 2.9 | 2.1 | 4 | 4.1 | 3.6 | 3.8 |

a) Approximate these points by a line (i.e. a first degree polynomial) using the least square method.
b) Compute the quadratic deviation $\delta$.
2. Consider the following table of $x$ and $y$ coordinates of 8 points:

| x | -2 | -1 | -1 | 0 | 0 | 1 | 1 | 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| y | 9.9 | 4 | 4.1 | 0.1 | 0.2 | -2 | -2.5 | -1.8 |

a) Approximate these points by a polynomial of second degree using the least square method.
b) Compute the quadratic deviation $\delta$.
